Re: Floater Treatment

Dear Dr. Geller:

I would like to thank you for your management of my floater issue in my left eye.

As we had discussed, I had undergone a vitrectomy in my right eye several years ago and experienced a number of acute complications thereafter. With the floaters in my left eye seriously obscuring my vision, I was confronted with the possibility of a similar scenario and was quite hesitant to broach that method of resolution.

While doing floater research on the Internet, I found and explored your website. It sounded too good to be true. I called, made an appointment, flew to Florida and subsequent to a brief meeting with you, elected to proceed. It was the correct choice.

We had several sessions. You were persistent in getting the job done. My floaters, some of which were recognizable as well known constellations, have been dispatched and clarity has returned. I am extremely pleased and will refer anyone I encounter with floater issues to you.

Thank you again for your innovation and motivation in resolving these vision issues.

Please feel free to use all or any part of this letter and also to use me as a reference if need be.
