RE: Floater Laser Procedure

Dear Dr. Geller:

It is with much thanks and gratitude that I write this letter. I have struggled with poor vision in my left eye for over three years. During this time I saw several different doctors, however, I kept receiving the same reports, the eye looked good, nothing was wrong. Finally, in 2008, I learned I had a thick floater in the central line of vision. That explained why I was looking through, what I can only describe as, a glob of vaseline.

Thank heavens the specialist knew of you and your procedure. I was very surprised (and pleased) at how quickly and easily the procedure went. The effect was immediate as well as remarkable. You have literally given me back my eyesight!

Because of your pioneering spirit, you have been a godsend to me (and so many others) who believed we were doomed to a life of distorted or diminished vision. Thank you Dr. Geller!

Sincerely,

  
Doris Yates

P.S. A special thanks to your staff on their courtesy and professionalism.
