Dr. Scott Geller
29 Barkley Circle
Fort Meyers, FL

Dear Dr. Geller,

Thank you for restoring my eyesight to nearly 20/15 from 20/30 in the right eye by means of laser treatment of the floaters. The left eye, though not as obscured by floaters, was also greatly improved in clarity of vision.

Prior to the surgery, I was spilling liquids at the dinner table. The brown fog of the floaters reduced/obstructed color to the point that I could not see liquids such as olive oil on a plate.

Driving was a chore, as the floaters moved in and out of my vision - mostly in - making reading of street signs difficult. Night time vision while driving was further affected by the "shading" of the floaters -

Hopefully, this procedure will quickly become common place.

Sincerely,
Adrian J. John M.D.
