Scott L. Geller, MD
South Florida Eye Clinic
4755 Summerlin Rd. Suite 1
Ft. Myers, FL 33919

Dear Dr. Geller and Staff.,

I wanted to take this opportunity to thank you for my recent, very successful treatment of my vitreous floaters.

After suffering for over two years with a problem that at least three other eye care professionals, including a personal friend, told me I "just have to learn to live with," I made the trip to Ft. Myers in the hope of an improvement, even if it were a very modest one. While initially annoying, as time went on my floaters eventually had gotten to the point where they interfered with reading, driving a car, watching TV, and just enjoying the world in general.

Your YAG laser treatment was literally a *miracle* for my sanity: after just the first treatment, my vision had improved so much that I could have gone home satisfied with the money spent. However, it got even better. The follow-up treatments removed virtually all of the obstructions and I estimate my vision is improved better than ninety five percent. It is so pleasant to see the world without interference!

The personal care and understanding I received from both you and your staff was such a refreshing change; my previous experiences with other doctors had varied anywhere from polite dismissal to near ridicule. As I said, they told me there was nothing that could be done, it's "no big deal," and that I should just suck it up and move on.

I'm glad I didn't listen to them, and I would encourage anyone plagued with vitreous floaters not to give up hope. Your treatment *does* work, it works well, and it has improved my outlook on life immeasurably.

Thank you again, and best of luck on the future.

Sincerely,
